

Tutorial Quiz 2018

# MATH1013 - Mathematics and Applications 1

## Tutorial Quiz 7 Calculus and Linear Algebra

Reading time: 1 minute  
Writing time: 10 minutes

Student Name: \_\_\_\_\_  
University ID: \_\_\_\_\_

### Question and Answer Book

#### Structure of Book

<i>Number of questions</i>	<i>Number of questions to be answered</i>	<i>Number of marks</i>
3	2	15

- Students are NOT permitted any calculators or notes during the quiz.
- Students are NOT permitted to collaborate in any form during the quiz. Any signs of collaboration or cheating will result in a nullified score and the course convenor will be informed of any academic misconduct.

#### Materials supplied

- Question and answer booklet of 7 pages.
- Working space is provided throughout the booklet.

#### Instructions

- Write your **student number** in the space provided above on this page.
- All written responses must be in English.

**Students are NOT permitted to bring mobile phones and/or any other unauthorised electronic devices into the examination room.**

## Instructions

Answer **all** questions in the space provided.

In all questions where a numerical answer is required, an exact value must be given unless otherwise specified.

In questions where more than one mark is available, appropriate working **must** be shown.

Unless otherwise indicated, the diagrams in this book are **not** drawn to scale.

## Linear Algebra

### Question 1

Recall that an operator  $T : \mathbb{R}^n \rightarrow \mathbb{R}^m$  is *linear* if

(i)  $T(\mathbf{u} + \mathbf{v}) = T(\mathbf{u}) + T(\mathbf{v})$  for all  $\mathbf{u}, \mathbf{v} \in \mathbb{R}^n$ ,

(ii)  $T(c\mathbf{u}) = cT(\mathbf{u})$  for all  $\mathbf{u} \in \mathbb{R}^n$  and  $c \in \mathbb{R}$ .

(a) Use the definition to determine whether  $T : \mathbb{R}^2 \rightarrow \mathbb{R}^2$  is linear, where

$$T \left( \begin{bmatrix} x \\ y \end{bmatrix} \right) = \begin{bmatrix} 3x + 4 \\ x + 6 - 2y \end{bmatrix}.$$

[3 marks].

---

---

---

---

---

---

---

---

---

---

(b) Suppose that  $S : \mathbb{R}^2 \rightarrow \mathbb{R}^2$  is a linear transformation, such that

$$S\left(\begin{bmatrix} 0 \\ 3 \end{bmatrix}\right) = \begin{bmatrix} 1 \\ 4 \end{bmatrix} \quad \text{and} \quad S\left(\begin{bmatrix} 1 \\ 2 \end{bmatrix}\right) = \begin{bmatrix} 3 \\ 5 \end{bmatrix}.$$

(i) Find  $S\left(\begin{bmatrix} 1 \\ 0 \end{bmatrix}\right)$ . (Show working). [2 marks].

---

---

---

---

---

---

---

(ii) Find  $\mathbf{A}$ , the standard matrix of  $S$ . [1 mark].

---

---

---

---

---

---

# Calculus

## Question 1

Evaluate the following derivatives.

(a)

$$\frac{d}{dx} \left( \int_0^4 \frac{1}{\sqrt{\log_e(|x| + \sec^2(x) + 10) + \pi}} e^{-\sin(x) \tan^{-1}(x^3+1)} dx \right).$$

[Hint: *You have to think*<sup>1</sup>.]

[3 marks].

---

---

---

---

---

---

(b)

$$\frac{d}{dx} \left( e^{\int_1^x s ds} \right).$$

[3 marks].

---

---

---

---

---

---

---

---

---

---

---

---

---

<sup>1</sup>Sorry about that...

(c)

$$\frac{d}{dx} \left( x^{\cos(x)} \right).$$

[3 marks].

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

### Bonus Question

Show that

$$\log_a(N) \log_b(N) + \log_b(N) \log_e(N) + \log_c(N) \log_a(N) = \frac{\log_a(N) \log_b(N) \log_c(N)}{\log_{abc}(N)}.$$

[4 marks].
